

Test #2 of Erlang

Christian Rinderknecht

7 October 2011

1. Write a function `uniq/1` such that, if

$$\text{uniq}(P) \xrightarrow{+} Q,$$

then Q is the list of unique items of list P , in the same original order.
For example,

$$\text{uniq}([a, b, b, c, d, c]) \xrightarrow{+} [a, d].$$

If all items in P are unique or P is empty, then Q is P .

2. Write a function `dup/1` such that, if

$$\text{dup}(P) \xrightarrow{+} Q,$$

then Q is the list of duplicated items of list P , in the same original order. For example,

$$\text{dup}([a, b, b, c, d, c]) \xrightarrow{+} [b, c].$$

If all items in P are unique or P is empty, then Q is $[]$.
